## Composites Machinery & Technology

The co-makers that make you go

### Company profile

Autonational, ever since its establishment in 1977, has been an innovative partner in streamlining and automating industrial production processes in a wide variety of markets.

For the composite industry Autonational supplies efficient, reliable and fully automated production processes and technology. High output, high quality products and low cost per unit are the benefits to our customers and partners.

Autonational supplies turn-key production processes around the globe, handling all production aspects, from raw material to end product.

The following mixture of ingredients is typical of Autonational:

- A team of development-, mechanical-, electrical- and software engineers.
- In-house production, assembly and commissioning.
- Experience with turn-key delivery worldwide.
- The urge for innovation.

The result: industrial products and custom-made solutions supporting your processes in a professional way.

### Our approach

In close cooperation with our customers, our goal is to optimize the technical production of their products. To achieve this goal, we focus on the following topics and their correlation:

- Optimising the production process
- Optimising the product
- Developing the product

In many cases our customers appreciate a presentation of a preliminary analysis. The result of this study will indicate the various solutions reviewed and the proposed Autonational solution.

Then, in close cooperation with our customer, the best option will be realised.

We consider ourselves a partner in the process. That means that we focus on the benefit of our customer.

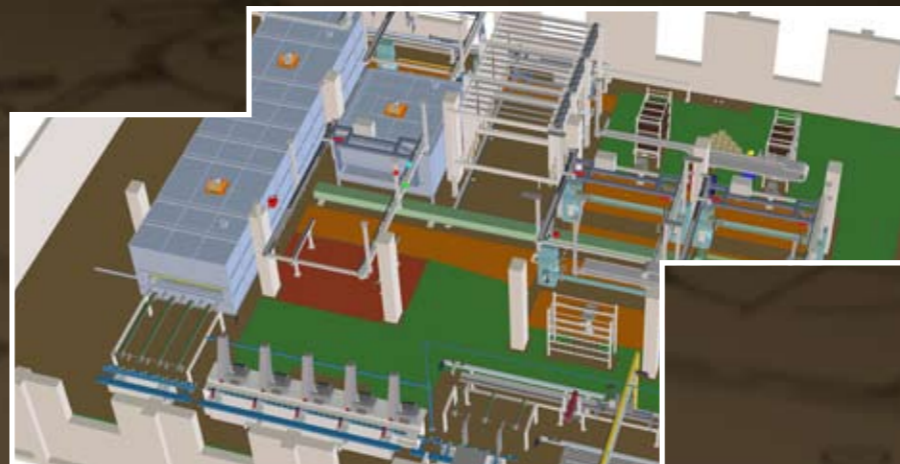

We create solutions!  
We are the co-maker that make you go!

### Composite Machinery & Technology

The composites industry is highly innovative and rapid growing, but also very complex. This growth is a result of the increasing use of composites in many sectors, recognizing the advantages that advanced composites can offer. Our innovative attitude is essential, because as the composites industry matures, it faces a number of challenges as advanced automation and making the production processes faster, cheaper and more consistent.

Autonational is an experienced partner for the engineering, production and turn-key delivery of production equipment for your composite products.

Because of the variety of composite products, Autonational engineers have a wide range of capabilities, know-how and solutions to optimize your product and production process.

Autonational has done multiple multidisciplinary turn-key projects with a combination of the following techniques:

- composite product design
- composite process technology
- filament winding (continuous, discontinuous)
- RTM
- mandrel pre-treatment
- resin storage and dosing
- curing
- mandrel release
- product machining
- pressure testing
- laser engraving
- track and trace

Due to our knowledge and experience of system integration, we are able to supply you tailor made production lines with all the necessary elements to guarantee a high product consistency and a competitive cost price.
